

**GLOBAL ECONOMIC LANDSCAPE**

- Though marginally slowing, payroll growth in the United States has been surprisingly resilient and has contributed to the view that a soft-landing rather than an outright recession may be in the cards. Non-farm payrolls (averaged over the past six months) for example have consistently declined for the past two years, but at approximately 300,000 monthly gains, stand well above the estimated replacement-rate of 90,000. Other metrics such as high GDP per worker, high job openings particularly in the leisure and hospitality sectors, and public sector payrolls remaining below pre-COVID levels suggest ongoing support for the labor market.¹
- Markets across much of the developed world (excluding Japan) priced in higher central bank rate expectations over the second quarter, ranging from increases of 0.30% to 0.40% for the United States and European Union to 1.75% in the United Kingdom (UK). A common foe – inflation – helps to explain these increases. Where inflation data surprised the most to the upside – the UK, followed by Australia, then Canada – there have been the largest repricing of market-implied central bank policy rates. Where inflation surprises were smallest (the US and Euro area), inflation stickiness and hawkish central bank rhetoric helped to reprice policy.²
- The balance sheet of the US consumer showed signs of continued shrinking into the second quarter of 2023. After peaking at \$2.1 trillion in mid-2021, excess household savings has since declined to \$0.4 trillion and the personal savings rate sits at 4.3% versus a long-term average of 8.9%. Revolving credit as a percentage of total income has also ticked up though it remains below longer-term levels. Consumer confidence has rebounded a bit from mid-2022 lows, though not to expansionary levels, again, creating questions about consumers' ability and willingness to continue spending.³
- After maintaining a stringent "COVID Zero" policy the Chinese economy reopened in force late last year. This transition took place in several stages, including the lifting of lockdown measures, domestic mobility normalization, and international travel and border reopening. From November 2022 to January 2023 Chinese equities rallied sharply on these reopening themes, with leadership in Apparel and Luxury Goods; Retail; Hotels and Leisure; and Travel and Transportation sectors. This rally has petered out since then, delivering a mixed signal on China's macro picture. Amid multiple uncertainties, there are several tailwinds that could support China's continued recovery, with attendant benefits for global growth. To safeguard the recovery, Beijing may enact more further easing measures, targeting housing, infrastructure and consumer spending.⁴

FIXED INCOME MARKETS

- Congressional approval of the Fiscal Responsibility Act (FRA) avoided a potentially disastrous default scenario by suspending the debt limit through January 1, 2025. Immediate relief notwithstanding, the US Treasury is expected to refill the Treasury General Account by issuing T-bills, with the influx of new supply acting as a quantitative tightening mechanism by removing liquidity from the markets. Higher deficits, due in part to rising interest costs (which are expected to increase from approximately 15% of government revenues today to 20% by 2032) may make the cost of capital higher for other borrowers and alter the composition of the US bond market.⁵

⁵ Source: Morgan Stanley, US Policy Pulse, Fiscal Crisis Averted, Now What? June 29, 2023.

- Certain economic data points suggest caution may be warranted for the US high yield market. The Federal Reserve's Senior Loan Officer Opinion Survey indicates an intention among banks to raise lending standards while the US Conference Board Leading Indicator has declined for the trailing year. These statistics have tended to correlate with a weakening high yield marketplace; although its recent performance has remained temperate.⁶
- Historical data from the past twenty-five years indicate that intermediate- and long-duration US investment grade bonds may provide a competitive return should the economy experience a downturn. For example, the Bloomberg US Aggregate Bond Index has averaged a return of 5.8% during recessionary periods within this timeframe versus 0.8% for the Bloomberg US High Yield Corporate Index. Global bonds have also handed in competitive returns, with the Bloomberg Global Aggregate ex-USD Index returning an average of 7.9%.⁷

EQUITY MARKETS

- 2023's bear market rally, during which the S&P 500 Index has risen roughly 15%, has come amid deteriorating economic data that has historically presaged a corporate profits recession. While first quarter profits were down 3% from the prior year and second quarter earnings may be down similarly, forecasts since March suggest a hockey-stick-shaped recovery, putting 2024 earnings estimates at an all-time high and in spite of some declining leading economic indicators.⁸
- The largest ten companies within the S&P 500 Index constituted 32% of its total weight as of June 30, 2023; the highest percentage in over twenty years. Earnings of the largest ten companies however comprise 22% of the S&P 500's total as of the same date. This divergence between stock prices and earnings drives has resulted in these largest companies trading at 145% of their longer-term average valuations versus 113% for the rest within the S&P 500 Index, indicating a divergence that may present an opportunity for active managers.⁹
- UK equities have a long-standing reputation for offering relatively attractive valuations; however, poor investor sentiment towards the general UK macro backdrop for much of the last five to 10 years has arguably left them even cheaper than normal. Poor sentiment and recent earnings growth notwithstanding, the UK has exhibited some of the strongest positive economic surprises and upgrades around the order of 1% to its GDP forecast, which may indicate the potential for an eventual improvement in equity market performance.¹⁰
- Mexico has been one of the most interesting international stock markets in 2023, substantially outperforming the United States as well as developed and emerging markets. The Mexican stock market has also exhibited a higher correlation with developed markets than emerging ones from 2020 through 2023. This distinct profile may be attributable to Mexico's relatively open economy, high number of regional trade agreements, and the economic tailwind of a strong US Dollar.¹¹

ALTERNATIVE INVESTMENTS

- The oil market has been widely forecast to tighten significantly in the second half of 2023. Yet, prices have been stubbornly range-bound. Outside some weakness in petrochemical-related demand, overall oil demand appears to be on track with prior expectations. Supply, however, has been remarkably robust. Non OPEC growth accelerated after the summer of last year and that strength has continued. In addition, the availability of discounted barrels (i.e. Russia, Venezuela, and Iran) has

¹¹ Source: Morgan Stanley, Mexico is Not Your Typical Emerging Market, June 28, 2023.

surprised on the upside. Demand growth appears likely to slow down as the post-COVID recovery tailwinds come to an end after 2023. Multi-year forecasts have wide uncertainty intervals but on current trends, and despite low investment, there appears to be little tightness on the horizon.¹²

- After hitting an all-time high in 2021, Initial Public Offerings (IPOs) hit their lowest level in at least twenty years in the second half of 2022. Substantial as this may be, prior market cycles show that IPO declines tend to trough between two and three years after peaking as private company operators may be looking to raise funds, indicating that an inflection point may be on the horizon.¹³
- Aspects of the US real estate market provide different indications of valuation and health. The capitalization rate spread (or yield advantage over US Treasury securities) of real estate started the second quarter of 2023 at 1.2%, its lowest level in over a decade, indicating only a moderate increase in expected returns over Treasuries. Vacancy rates also continue to differ by economic sector. Industrial and retail property vacancy rates for example continued to decline while office vacancies remained elevated as the working from home trend has continued.¹⁴
